

## Software Editions

**Stonemont** offers affordable, scalable, and flexible quality control solutions to meet the needs of all aggregate and asphalt producers.

### **The Desktop Edition**

- ✓ Simple data entry and powerful data analysis/reporting tools.

### **The Server Edition**

- ✓ The power of the desktop edition with the "real-time" data availability of a server.

### **The Enterprise Edition**

- ✓ Includes browser-based reporting and data analysis tools.

Our software products are scalable from the single plant to the large company. They will enable you to analyze data and make decisions in real-time providing your company a competitive advantage that your customers will realize through a more consistent product.

"...aggQC has improved our business. This software has been a valuable resource for quality control, production, sales and most importantly customers! The Blend program has allowed us to easily blend to create new products for our customer needs. It has saved us countless time and money. The support from you and your staff has been excellent. I highly recommend."

## Quality Control You Can Profit From

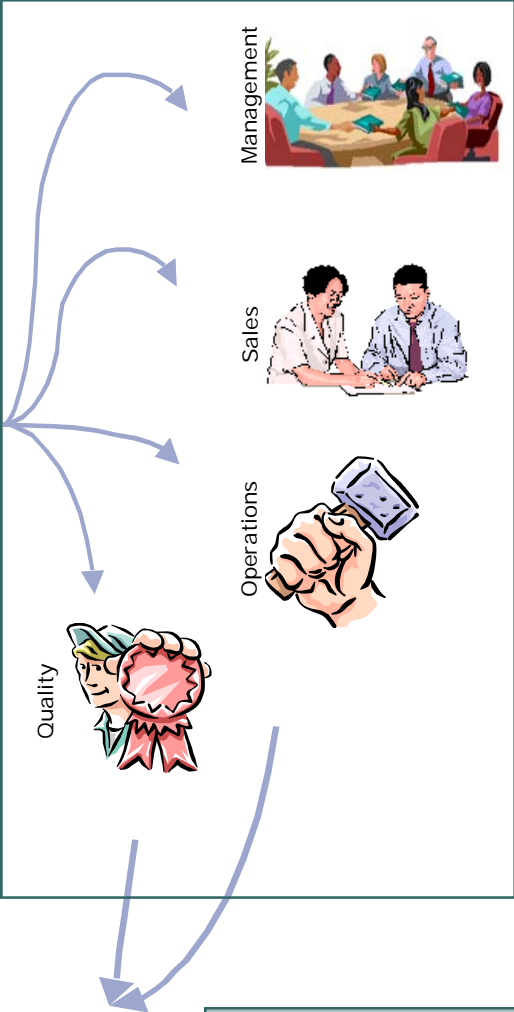

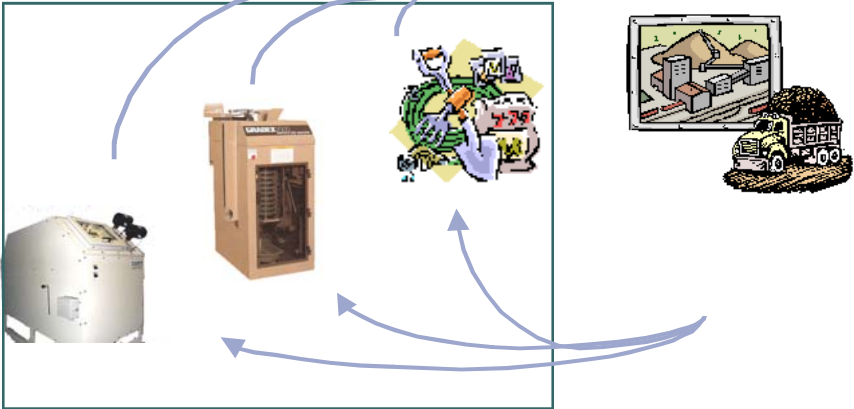

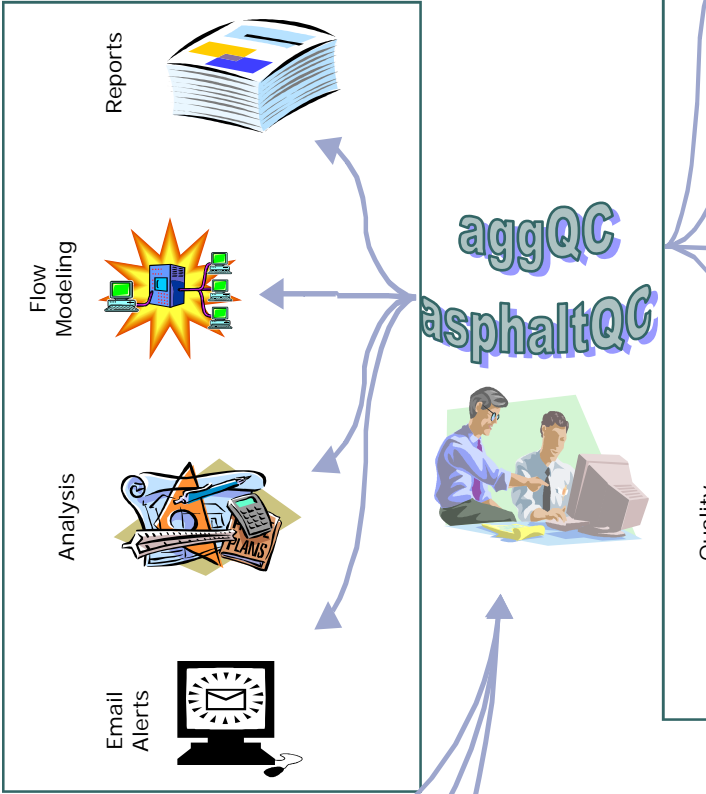

**AUTO-REPORTS** and auto-analysis are reports and charts that are automatically generated and optionally emailed daily, weekly or monthly using pre-defined user-specified queries. Logon in the morning and they are available for immediate review.

**EXCEPTION & SUMMARY REPORTS** that used to take hours or days now take seconds! Consistent reporting throughout the organization benefits internal and external review of the data.

**QUICK ANALYSIS** tools provide detailed statistical summaries and charts with a single mouse click. Quick Analysis charts enable rapid identification of trends and other process changes.

**EMAIL ALERTS** can be automatically sent to notify the appropriate personnel of a gradation or other quality test failure.

**INTEGRATED** plant flow modeling and crusher sampling modules provide a complete solution for your company.

**Management** realizes the time and resources invested in quality control has contributed to the bottom line. Real-time access to reliable product quality data enables rapid decision making that prevent problems before they become customer complaints, thereby reducing credits and saving money.

**Sales** personnel better communicate product quality to customers. **Customers** appreciate the quick response to product quality requests and the professional and consistent reports provided by the company.

**Operations** uses the powerful analysis, charting, and reporting features to monitor the process in real-time thereby improving product consistency. Operations also use our crusher sampling and plant flow modeling tools to maximize production.

**Quality Control** takes advantage of the automation features to facilitate and reduce errors during data entry. The quick charts, rule checkers, and email alerts enable quality control to promptly alert operations of any potential problems. Reduce the time necessary to provide product quality data to sales, operations, customers, and DOT agencies (AL, FL, GA, IA, IL, MD, NC, OH, OR, PA, SC, VA, WV).

- Summary of Features & Benefits**
- ✓ Real-time access to reports and analysis. Know what you are producing and shipping immediately
  - ✓ Customer relationship management through quality focused incident reports
  - ✓ Exception & Summary Reports
  - ✓ Supports automation via scales, barcode scanners, and visual and mechanical graders
  - ✓ Ensures consistent approach to quality control for both internal and external distribution of data (customers).
